Atlantic Auto-fill Kit

Kit includes adaptors for Garden Hose or 1/2" Irrigation line.

- Designed to keep a correct level of water in your Skimmer box, Echo Chamber or other type of water storage unit.
- The Atlantic Auto-fill Kit is to be installed inside the pump chamber, between the filter mat and the discharge hose from the pump. Drill points for the location of the Auto-fill have been provided on all Atlantic Skimmer boxes. (See the skimmer installation instruction for drill point specifications.) Install the pump, Check valve Assembly and the pump discharge pipe before installing the auto-fill. This will help you determine where to place the Auto-fill, so that it has proper clearance on all sides.
- Once you have determined the location of the Auto-fill, drill a 7/8" hole using a spade bit or hole saw. Insert the Auto-fill making sure the gasket is on the water side of the unit, and the plastic retaining nut is on the outside. (Do not over-tighten the retaining nut.) Once water is supplied, the Auto-fill will maintain the set water level by automatically adding water when the level drops. This level can be adjusted by raising and lowering the height of the Auto-fill float.
