## Bio-Activators

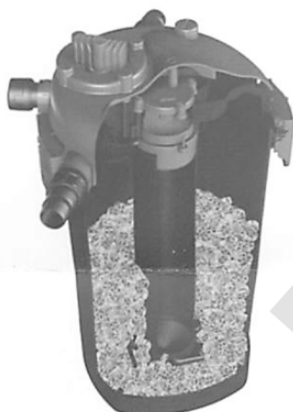

MFG# 26580

**TetraPond's** new Open-Profile Bio-Activators offer superior filtration performance over closed bio-media and lava rock.

These Bio-Activators have been perfected and used in the commercial aquaculture industry where demanding filtration is required due to extreme environmental conditions. The advanced technological design of the Bio-Activators provides a large active surface area for the beneficial bacteria to colonize for upgraded biological filtration.

### Bio-Active Pressure Filter Application

If you own a Bio-Active Pressure filter there is no need to replace the Bio-Activators unless you lose them. Do **not** add more media to the bio-filter than is specified below.

**BP1500 & BP1500-UV** Holds approximately 8 liters of Bio-Activators  
**BP2500 & BP2500-UV** Holds approximately 10 liters of Bio-Activators  
**BP4000 & BP4000-UV** Holds approximately 12 liters of Bio-Activators

### Cleaning the Media:

Back flush the media every 2 weeks. This will keep the filter from clogging, while maintaining the beneficial bacteria colony. Follow maintenance steps listed in the instruction guide supplied with the Bio-Active Pressure Filter.

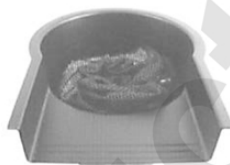

### Waterfall Filter Application

For the TetraPond waterfall filter, we recommend using 6 to 8 liters of bio-activator media to the mesh bag (supplied with filter). Also add weight to prevent bag from floating. (i.e. a few rocks).

### Cleaning the Media:

Repeat the following simple steps once every 2-3 weeks:

- 1) Place the mesh bag containing the media in a bucket of **pond water**.
- 2) Flush out the dirt and debris by shaking the bag underwater.
- 3) Use the dirty water in the bucket to nourish plants in your garden.

**Never use soap or detergents to clean the Bio-Activators.**

### Other Filter Applications

If you own filters of another brand, the amount of media needed will depend on the filter size.
