

STEP BY STEP DIRECTIONS

Disinfecting Carpet with Sani Powder

Step 1

- Thoroughly clean the carpet that is to be disinfected. Once the carpet is cleaned and extracted you are ready to apply Sani Powder

Step 2

- In a pump up sprayer fill the tank with room temperature tap water. Cut open the appropriate number of quart packets of Sani Powder based on the amount of water used. E.g. 4 packets for a gallon of water. This will give you 600 ppm hospital grade HOCL.
- Let mixture sit for 10 minutes before using. Once activated product needs to be used in 60 days.

Step 3

- Pump up sprayer and adjust spray pattern to an 8-10 inch spray pattern. Spray the Sani Powder at a rate of 1 gallon per 1000 sq ft of carpet. The square feet application stays the same for lightweight or heavyweight carpet. Let Dry.
