

Micro USB Cells

ASP Lithium-ion micro USB batteries are rechargeable by means of their integral charge port. They retain the same capacity as traditional rechargeable cells. The addition of an ultra slim charge circuit provides direct charging of the battery. This allows the cells to be recharged outside of a light.

Micro USB cells incorporate the latest Lithium technology. They are stable and rapidly recharged. While charging, an indicator lamp blinks red. When fully charged, the indicator light turns to constant green.
