ECD 230 PARALLEL INTERFACE CASH DRAWERS

The 230 PL Cash Drawer has an anti-static, parallel interface board that permits the user to connect the cash drawer and the printer as a pass-through system. The open character is user-selectable through DIP switches and the cable connections are made with standard computer cables (not included). All data and control lines pass through the interface board and then to the printer. This arrangement provides universal capability with any working computer to printer scheme.

MMF's Parallel Cash Drawer is unitized steel and can be ordered in two sizes. Each has a brushed, stainless steel front panel and uses a 12 V DC Power Adapter.

The external plunger lock is standard, but a 3-position, electronic locking device is an ordering option. The ABS "Tuffy" Cash Tray has 5 coin/5 bill sections with storage space below the tray for checks, coupons, etc. Color choices include Putty, Black, Cool White or Galaxy Gray.

Physical Features:
