

PATRON & 1800 HEAT SHRINK INSTRUCTIONS

1. Make sure the pourer is fully inserted into the bottle. Both the pourer and liquor bottle neck should be completely dry.
2. Open seal to form a circle and then slide the seal down over the pourer until it rests on the upper part of the bottle.
3. Hold the seal in place, making sure the pourer remains fully inserted in the bottle.
4. Heat the seal with a heat gun to shrink it around the pourer, turning the bottle to evenly shrink seal from all sides. If seal is applied properly, the vent hole at the base of the pourer should not be covered to allow air flow into the bottle.

If you have any questions or would like to order more liquor system supplies, please give us a call Monday – Friday between 8am – 5pm.
