

Ultimate Tap Lock

1. Loosen tap lock by turning locking wheel (D) counter-clockwise until it reaches the end of the threads.
2. Slide shaft (A) into faucet opening while parts B, C & D are rotated back toward the beer tower.

3. When shaft (A) is in the faucet opening as far as it will go, rotate parts B, C, & D back towards the front of the faucet.
4. Align part (C) with faucet handle.
5. Tighten tap lock by turning locking wheel (D) clockwise until it pushes part (C) firmly against the faucet handle.

6. Once the locking wheel (D) is firmly tightened against the faucet, make sure that one of the holes ends up below part (C).
7. Insert the padlock into this hole so the locking wheel will not turn counter-clockwise.
