

# TIPS FOR BATHROOM LIGHTING

## *Lighting for Powder Rooms to Master Baths*

BATHROOMS CAN REQUIRE MANY LAYERS OF LIGHT – OVERHEAD, ABOVE THE VANITY, IN THE BATH + SHOWER AREA AND IN THE WATER CLOSET. IN A POWDER ROOM, YOU MAY BE ABLE TO USE JUST A SINGLE FIXTURE IN THE CENTER OF THE ROOM OR MOUNTED ABOVE THE MIRROR. WHILE A MASTER BATHROOM AND OTHER BATHROOMS WHERE PEOPLE WILL BE DRESSING AND GETTING READY FOR THEIR DAY WILL REQUIRE MORE LIGHTING.

Bathrooms can require many layers of light – overhead, above the vanity, in the bath and shower area and in the water closet.

In a powder room, you may be able to use just a single fixture in the center of the room or mounted above the mirror.

While a master bathroom and other bathrooms where people will be dressing and getting ready for their day will require more lighting.

A good rule of thumb when lighting a vanity area is to aim to fully surround the face with flattering light.

You can do this by installing a fixture that is at least 24 inches wide above the vanity mirror (for a single vanity.) Combine that with a pair of sconces mounted on either side of the mirror, at least 28 inches apart and 5 feet above the floor.
