Product Features

- ImpactWhite® 1145 golf impact front projection screen material
- 0.8 gain with wide diffusion uniformity allows viewers to see a clear bright uniform picture from any angle
- Resists indentations from golf impact and withstands ball speeds up to 200 mph.
- 4.5 mm warp knitted fabric is comprised of three-layers for maximum performance in image quality, shock absorption and endurance
- Internal space suppresses and dampens the noise generated when golf ball impacts screen
- High-strength warp knitted fabric absorbs impact reducing ball bounce back
- ISF Certified for accurate color reproduction – An industry standard for high-fidelity video display systems.
- Commercial grade heavy-duty metal tube frame construction including all corner fittings.
- Includes black enclosure cover panels for top and sides
- Black backing is also included to eliminate light loss and back reflection – Provides superior contrast and prevents picture degradation.
- Impact screen has metal ring grommets and attaches to frame using ball bungees to provide a flat and taut surface
- Easy installation without the hassle of acquiring your own EMT framing.
- 2-Year / 3-Year ENR-G Manufacturer's Warranty by Elite Screens
