

Odormute C™

Directions for:

Lawns, Kennels and Dog Runs
Other Uses – Garbage Cans, Diaper Pails,
Small Animal Cages, Smoke Odor

Odormute is a blend of natural enzymes that will eliminate any organic odor. The action of Odormute chemically changes the source of the odor and eliminates it. It does not simply mask the odor.

Odormute is safe to use on any surface – concrete to carpets – yet is so strong, it even works on skunk odor on pets. Odormute has been sold with a money back guarantee for over 30 years. Odormute will not harm people, pets or plant life.

Important: Odormute works by chemically changing the source of the odor. The Odormute solution **MUST** come in direct contact with the source of the odor in order to eliminate it. If other chemicals or cleaning agents have been used, they may have “set” the odor permanently.

Any Organic Odor – Basic Solution

Mix at a ratio of 1/2 tablespoon to one gallon of warm water.

1. Mix Odormute with warm water until completely dissolved. For best results, dissolve Odormute in a pint of warm water. Allow 5 – 10 minutes, mixing occasionally, to make sure all powder is dissolved. Then, add this solution to the rest of the water.
2. Enzymes are activated by adding warm water. Once activated, enzymes must be used within 4 hours for best results.
3. Water temperature must be between 45 degrees F to 140 degrees F, with the optimum temperature between 70 degrees F and 90 degrees F. Freezing will not harm enzymes, however, temperatures above 140 degrees F will destroy them.

Lawns, Kennels and Dog Runs

Initial treatment

In areas with an extreme odor problem, use a solution of 1/2 tablespoon to 1 gallon of water. Mix Odormute in one pint of warm water until completely dissolved (5-10 minutes). Add this solution to the rest of the water and stir. Apply this solution with a Lawn and Garden type sprayer, sprinkling can or simply wash down the area with a bucket. The Odormute solution must reach the source of the odor to eliminate it. Allow to dry.

Regular Use after initial treatment

Use a solution mixed to a ratio of 1/2 tablespoon per 3 gallons of water following the directions above.

Other uses for Odormute™

Odormute is effective in eliminating organic odors and is safe to use on any surface that is safe in warm water. If you are not sure, treat a small area before applying in full treatment.

Use Odormute to treat: garbage cans, dumpsters, diaper pails, small animal cages, to remove smoke odor, to eliminate bad odors from refrigerators and freezers, etc. Odormute works on any organic odor.

Cat Problems – carpet, fabrics, litter box

1. **Spraying:** Mix Odormute solution at a ratio of 1/2 tablespoon of Odormute to 1 gallon of water. Mix Odormute in a pint of warm water until completely dissolved (5-10 minutes). Add this solution to the balance of the water to be used.

Using a sprayer (hand held or Lawn and Garden type, depending on the area to be treated) thoroughly spray the Odormute solution on the area the cat has sprayed. Be sure to treat behind any baseboards or other areas where the urine may have run. Odormute must come into direct contact with the source of the odor to eliminate it. Any residue left after drying can be removed with a damp cloth. Note: Odormute will eliminate odors but it is not a deterrent and will not keep your cat from repeating this behavior.

2. **Litter Box Odor** – sprinkle 1 TBSP on top of fresh litter and after adding new litter.

Our History...

Odormute was invented by Ken and June Etter of Ryter Corporation, Inc., pioneers in the production of bacteria and enzyme products since 1957. Our purpose today, as was theirs then, is to continue to produce the highest quality natural solutions to everyday problems. These products are a result of years of research, experimentation, and development. All Hueter Toledo, Inc. products are harmless to humans, pets and plant life. They are non-caustic and non-poisonous.

Thank you for purchasing Odormute. If you have any questions or concerns, please write or call:

ODORMUTE C AGRICULTURAL APPLICATIONS

Use lukewarm water to make solutions. Mix well prior to use. If environmental temperatures are below 60 degrees F, double the recommended dosages. A three week accumulation of manure is necessary to initiate the manure digestion program. It is important that Odormute C be used in well ventilated houses at the recommended rate. Do not use in the presence of any bacteriostatic chemicals. In dead animal disposal pits, the pit must have some drainage as it is necessary to add water frequently to just cover the carcasses.

INDICATION	TREATMENT	TANK SPRAYER		AUTOMATIC PROPORTIONER			HOW TO USE THE SOLUTION
				Mix in water to make 2 gallons of concentrated solution.			
		OMC	WATER	22 gal.	85 gal.	128 gal.	
Stabilization lagoons per 1 million gallon capacity	First application	12 LBS	100 OR MORE GALLONS	**	**	**	Spray evenly over the surface of the lagoon.
	Re-treat as necessary	6 LBS	100 GALLONS				
Manure holding tanks and pits per 10,000 gal.	First application	2 LBS	100 OR MORE GALLONS	32 OZ	32 OZ	32 OZ	Spray evenly over the surface of the holding tank or pit.
	Re-treat as necessary	1 LB	100 GALLONS	16 OZ	16 OZ	16 OZ	
Poultry & hog houses, cattle barns, feed lots, mink & wild animal ranches and manure piles	Repeat as necessary	1 OZ	10 GALLONS	2.5 OZ	9 OZ	13 OZ	Spray evenly over the area to be treated at the rate of 1 gallon to 500 square feet.
Poultry litter management	Repeat as necessary	1 OZ	1 GALLON	22 OZ	**	**	Spray evenly over the area to be treated at the rate of 1 gallon to 500 square feet.
Manure management	Repeat as necessary	1 LB	50 GALLONS	7 OZ	27 OZ	41 OZ	Spray evenly over the area to be treated at the rate of 1 gallon to 500 square feet.
Digest dead animals in disposal pits per gallons of contents	First application	10 OZ	50 GALLONS	10 OZ	10 OZ	10 OZ	Pour or spray into pit. Add additional water to level that just covers carcasses. Maintain water at this level.
	Re-treat weekly	2 OZ	10 GALLONS	2 OZ	2 OZ	2 OZ	

** This dose does not dissolve completely.

ODORMUTE C INDUSTRIAL APPLICATIONS

Use lukewarm water to make solutions where indicated. Mix well prior to use. If environmental temperatures are below 60 degrees F, double the recommended dosages.

INDICATION	AMOUNT	FREQUENCY
Barber and beauty shop sinks	1 teaspoon	Daily
Basement, bar and rest room floor drains	1 tablespoon per inch of drain	Monthly or as needed
Bathtub, shower, wash bowl drains	1 teaspoon	Monthly
Garbage cans/dumpsters/compactor	1 tablespoon	Wash down in 5 Gallons of water as needed
Garbage disposal unit	2 tablespoons	Weekly
Grease traps (commercial)	1 cup to each 10 gal. capacity	Daily or as needed
Laundry tubs	2 teaspoons	Weekly
Lavatory, sinks and urinals	1 tablespoon	Weekly
Septic tanks and cesspools	1 cup per 500 gallons	Yearly or as needed
Marine and trailer toilets	1 tablespoon per 10 gallons	Each filling
Outdoor toilets	1/2 cup to 5 gallons water	Monthly

**Treatment of grease traps should be made according to volume of grease. A rule of thumb would be: Commercial - Daily Large households - Weekly
