>> SHOULDER STOCK INSTRUCTIONS

The stock that you have just purchased is designed specifically for use with the Retrieiv-R-Trainer hand-held launcher. It will improve the distance and accuracy of your shots and with practice can provide for single hand cocking and firing—not possible without this accessory while using your hand held launcher.

The stock is designed to work with RRT hand held launchers that were manufactured from 1990 to the present. The grips used during this period will require slight trimming to work properly with the stock. The only trimming required will be at the base of the grip nearest the pull knob on the launcher. This can be achieved by using a sharp utility knife or by turning the base of the grip on a sander. The RRT Launcher should fit snugly into the stock. If you have recently purchased a new RRT Launcher (will have RRT LAUNCHER on the grip in raised lettering) you will not have to modify/trim the grip. Please reference image to the right. Your launcher grip must look similar to the image below in order for it to slide into the shoulder stock without modification.

If you are unsure of any of the steps or procedures in these instructions please contact us for further instructions and assistance.

>> INSTALLATION OF THE TRIGGER

Included with the Shoulder Stock is a pull knob conversion kit consisting of a pull ring and allen wrench. Slide the pull ring over the pull knob until the allen set screw will engage the groove of the pull knob. The ring will be close to flush with the bottom of the pull knob. Tighten the set screw securely with the provided allen wrench.

>> SHOULDER STOCK ASSEMBLY & LAUNCHER

Your Shoulder Stock is manufactured in 2 sections for easy portability and storage. Section A is the end in which your Retrieiv-R-Trainer will be located. Section B has the padded shoulder/thigh rest for your comfort during training. To assemble, simply line up the hole in Section A with the locking button in Section B. Slide the 2 parts together until the locking button is fully engaged into the hole in Section A.

You are now ready to install your Retrieiv-R-Trainer into the shoulder stock. Release the thumb latch on the launcher to make sure it is not loaded. Position the launcher over the end of Section A while aligning the pull knob pin with the slot in Section A. Keeping the pull knob pin aligned with that slot, insert the launcher in the tube. Position the launcher so that the thumb latch on the launcher is in line with the slot in Section A.

A light coating of lubricant will help the launcher slide easier into the Shoulder Stock. If lubricant is used during installation, the grip of the launcher must be cleaned thoroughly after it is removed from the Shoulder Stock and before it is used as a standard hand held launcher.

>> MAINTENANCE

User must thoroughly clean the Shoulder Stock after each use. Be certain that the Shoulder Stock, Launcher, and Dummy are all free of debris prior to every firing/launch. Improper maintenance and failure to properly and firmly position the Shoulder Stock may result in serious injury or death.

>> PREPARATION FOR FIRING

Place the training dummy over the barrel of the Retrieiv-R-Trainer. Next, open the launcher and insert the desired power load in the chamber. Make sure that the load is properly seated in the chamber. Slowly place your Retrieiv-R-Trainer into the closed position. Make sure that the thumb latch has tightly secured the two sections (head and breech assembly) together.

ATTENTION: Never insert a power load in the chamber prior to placing a training dummy over the barrel. To do so may cause premature firing due to the displacement of air within the barrel pushing the load back in the chamber.

>> FIRING

Your Retrieiv-R-Trainer can now be fired from either your shoulder or your thigh/hip. From either position you must squarely place the padded butt end of the stock against your body and maintain a firm grip on the stock. To rest it only on an edge of the pad could cause serious injury or death. Aim the Retrieiv-R-Trainer in the direction of your desired target area with your holding hand positioned in such a manner as to allow you to slide your hand toward the firing pin and grasp it with your index finger. Gently pull back on the firing pin until you have reached the end of its travel. Firm up your grip on the stock and release the pin firing the Retrieiv-R-Trainer.

The Shoulder Stock does not contain any parts that will rust or corrode. It is guaranteed for one year from date of purchase against defects in material and workmanship by the manufacturer.
