

GUN DOG SUPPLY

Bark'n Boots Grip Trex

Sizing Chart

NOTE: It is important to select "Actual Size" under the print size options when printing this PDF file.

Sizing and Measuring Your Dog's Paws:

Measuring your dog's paws is crucial to getting a proper fit. Bark'n Boots are built to secure around the ankle but below the carpal pad. The boot should have room in the paw area, allowing the paw to spread when bearing weight. Size is based on paw width, not length.

Sizes Available: 2.0", 2.25", 2.5", 2.75", 3.0", and 3.25"

Have your dog stand on a firm surface. Print this chart and place under his front paw. Lift your dog's opposite front paw to firmly place weight on the paw being measured. Measure the distance and choose the appropriate size.

In-Between Sizes: Choose the larger boot for comfort and performance
