

GDS Holding Blind Assembly Instructions

1. **Assemble all Poles** -- Screw lower half of each pole into the upper half.
2. **Insert All Poles** -- Insert each pole into one of the sewn pockets. Poles should go all the way into the pocket leaving material just above the crossbar. Be sure to insert all poles before placing your Blind.
3. **Install Blind in Ground** -- Push each pole into ground in the desired location using your feet on the crossbars. Do not hammer crossbars. After each pole is secure move on to the next until all poles are set.
4. **Securing the Blind** (optional) -- In high wind situations you may want to secure the fabric to the poles. This may be done by wrapping a small bungee, zip tie, or cord (not included) around the post below the crossbars and then securing it to the fabric using the provided grommets hole.
5. **Disassembly** -- Reverse the above steps to disassemble the blind for transportation or storage if desired.

*cord not included
