

Hound Heater Bracket Assembly Directions

This Mounting Bracket is for use in an Igloo style house with the:
Hound Heater Deluxe/Plus and Heat-N-Breeze Deluxe

The instructions for each unit are very similar.

1. Lay the heater down with the flat (back) side up. Align the bracket towards the bottom of the heater. Using the enclosed hardware, attach the bracket to the heater as shown in photo #2.

2. You are now ready to find the perfect spot in your igloo style house for the heater. We recommend you hold the heater/bracket assembly on the interior wall of the house towards the floor and slide the unit up the wall until the heater is fairly vertical. You want to make sure your heater is at least 12" from the floor.

3. When your location is chosen, mark the four corner holes. Drill the proper size holes for the bolts you have chosen. We recommend 8/32" bolts and a 1/8" drill bit. You will also need to drill a 1 1/4" hole for the cord to go through the wall of the igloo house - this can be drilled in the center of the four holes you previously marked.

Your heater is now ready to install in your igloo style house. We recommend using nuts and bolts for this, not screws.
