

# Stellaris

The **ultimate extraoral 2D/3D flexible solution**  
you have always dreamed of for your clinic

1 11x10 HD volume for Sinuses Evaluation.

2 5x6,5 HD small volume for endodontic and periodontic evaluations.

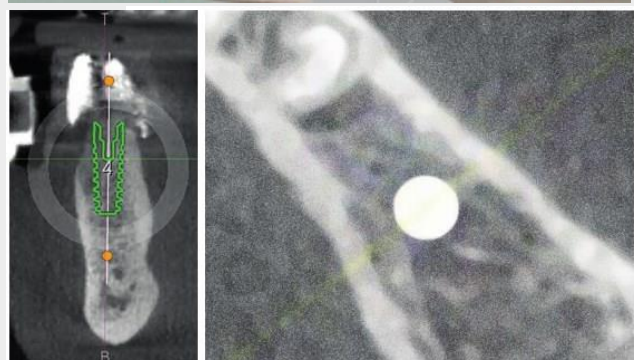

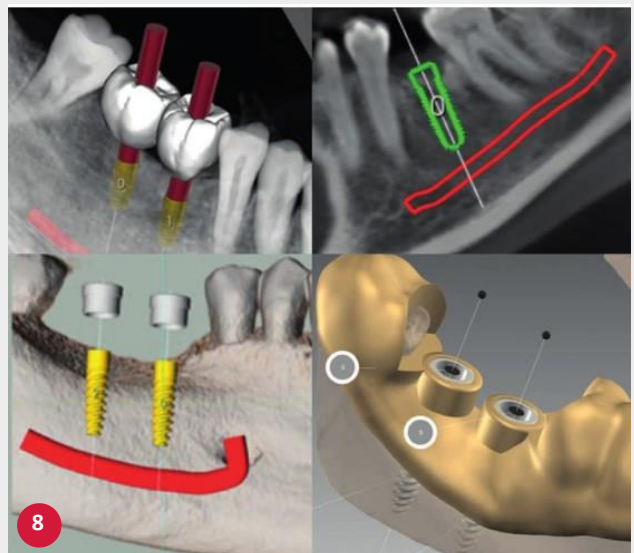

3 7x6,5 volumes for local evaluations of periodontal diseases or implants osteointegration checks.

5 Example of multiple Implant Planning.

6 11x10 HD for a full mouth evaluation.

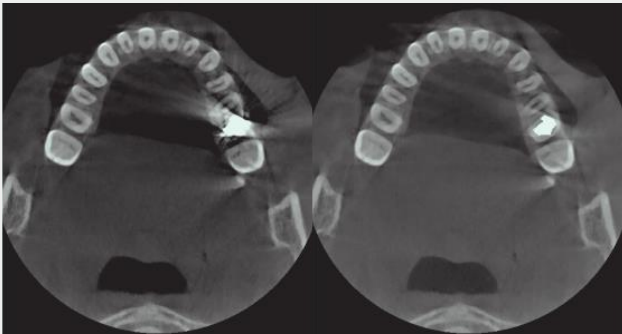

7 Cross sections – evaluation of the cortical bone.

8 Examples of Single and Multiple Implant Planning.

Without AMAR

With AMAR

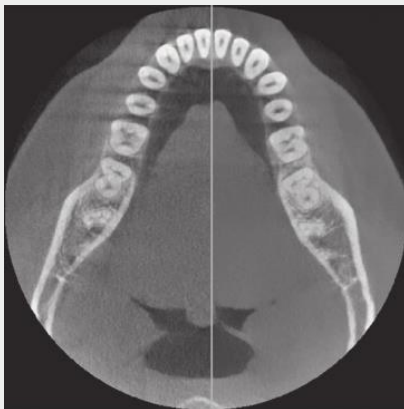

## Automatic metal artifact reduction AMR

Metal artifacts distort in CBCT imaging.

Without ANR

With ANR

## Automatic noise reduction

The presence of noise in 3D images can disturb the visibility especially in ENDO applications. Xline ANR technology performs automatic reduction of noise.

## New dynamic and automatic Image Focusing

Thanks to the innovative and smart sensor-software interface technology, the panoramic images are automatically focused at every exposure, adjusting eventual patients' mispositioning or movements artifacts.
