

Tools Needed:

- Phillips Screwdriver
- Allen Wrench (included)

Instructions:

- 1.) Screw in the leveling glides to the support feet by hand.
- 2.) Attach cap to one of the support feet using bolts shown.
- 3.) Insert the beam into that end and set on the other support feet. Space the center support feet on both sides of the middle seat shell. Then, attach the other three caps to the beam in the same manner.
- 4.) Attach the seat shells to the pre-installed seat brackets using the screws provided.
