

PK-OSB4 CATCHER

INSTALLATION DIRECTIONS

This catcher comes with a bracket that has to be bolted to the mower deck for installation. It is for a Scag Advantage Deck only, which has a 45 degree angle on the front of the deck. The catcher also has a 45 degree angle on it's opening to match the decks lines. Leave the bracket on the catcher and hold the entire assembly against the deck where it would belong. (Use 2 people for tighter fit and better installation). It should alien itself were it has to go. Make sure the angle of catcher opening is resting on the angle of the deck. The Bracket will hang off deck above the angle portion, this is correct. Hold everything tight against the deck where you want it and then mark the holes. Please note mark the 2 inner bracket holes that are on the flat portion of the deck. Drill the deck holes and bolt the bracket on to the deck. Simply insert the catcher mounting pins into the bracket. Your installation is now complete. If you need further assistance please call 570 226-6093 Monday-Friday.
