First Team Sports, Inc. | FT196 Full-Tilt 180 Breakaway Goal

1. GOAL DESIGN – Goal shall be constructed using 5/8" diameter steel ring with continuous wire netlock attachment. Ring shall be the official 18" inside diameter. All backplate components shall be constructed of 1/4" thick steel. Goal shall employ Flush-Mount ☐ construction. The backplate shall be punched for mounting to any backboard with no "below board" protrusion. Rims that do not include First Team's Flush-Mount mounting plate design are not considered equal. The rim support brace shall be \(\frac{1}{2}'' \) x 1 \(\frac{1}{2}'' \) steel and provide continuous support around 60% of the ring. The breakaway mechanism shall be of the positive lock design, factory preset. An automatic return shall be provided by means of a heavy-duty wire return spring, which shall also cushion the breakaway action when the pressure release setting has been exceeded. Two hardened steel balls shall be contained in a tubular assembly with each being forced outward with equal pressure by a detent. Said ball/detent mechanism shall provide proper breakaway pressure. Goal shall be designed and constructed so that when downward pressure exceeding the factory setting is applied at any location within 90 left or right of center, the ring assembly will pivot downward. Goal shall meet all applicable NCAA, FIBA and NHSF rules including NCAA Men's Division I rule regarding elasticity testing. All pinch points shall be eliminated for player safety. All components shall be coated with an official orange powder coated finish. A white nylon net and mounting hardware shall be provided. Rim shall be made in the USA, carry a 7-Year Superior Warranty and weigh approximately 30#.
