

TEMP°ALERT® 40

Avoid frost shattered pipes and the water damage that can follow

TA-40 (PN #1100)

For simple low cost protection from freezing in homes, mountain cabins, or any unattended building, the Temp° Alert® 40 (TA-40) will activate any hardwire or wireless alarm system if the temperature should fall below 39° F (4° C). The TA-40 offers positive protection and peace of mind to residential and business owners concerned about the risk of frost shattered pipes and the water damage that follows.

An added advantage of the TA-40 is the unit's compact size which enables it to be installed in virtually any setting without being noticed. Why not provide your customers with **total** security by including reliable temperature protection in their security system?
