SHOCKING YOUR HOME

1. Make sure you are getting 3 ppm of chlorine after the retention tank (check hose Bibb after Retention tank with pool test kit)
2. Bypass Water Softener and Carbon Filter using the bypass valves that say bypass and service

3. Next you will start running water in your farthest bath tub on the cold water side. You will run the water until you smell chlorine or test chlorine with your test kit. **WARNING:** Always use gloves when handling chlorine and protective eye wear
4. Once you have chlorine at the tub you will turn off the cold water and turn on the hot water until you smell chlorine or test chlorine with your test kit
5. Shut that bath tub off and repeat this step at every fixture point hot and cold until you have chlorine in all the lines.
6. Flush each toilet 3-4 times
7. Leave the water off for no less than 8 hours. Turn off your ice machine on the refrigerator usually we recommend shutting it off over-night. **WARNING:** No one can drink or bathe in this water. You can use the toilets as usual

8. After 8 hours turn the bypass valves back to the service position

9. Run the water in every location until you do not smell or test chlorine. Flush the toilets 3-4 times and turn back on ice machine and throw away the next to batches of ice. **WARNING:**

Open all windows and doors to properly ventilate your home. Do not directly breathe the chlorine fumes.

10. Regenerate the carbon filter after this manually (see your manual), and after carbon filter is done regenerate the water softener (see your manual)
