

**1400 continuous ink system Installation:**

1. remove the cartridge cover
2. install the cartridges
3. route the tubes
4. insert the air filters
5. ready to print

This ink system does not need you to reset the cartridges manually. No any other program is needed to make it work.

If your printer does not recognize the cartridges, please take the cartridges out and re-install the cartridges several times.

Before you install this 1400 ink system, please remove the cartridges cover first, you can take a look at the video here: <http://continuousink.echostore.com/r260.wmv>

Pull out the smaller color rubber plugs from the air holes on the top of the tanks. Then plug the air filters into the air holes (the fatter side is down to the tanks) or keep the air holes open, Which lets the system breathe, if not, it may not work properly. Please insert the air filters gently, or the stems will be broken.

Please put the tanks and your printer on the same desk and keep them on the same level. If the tanks are higher, ink may flow into your printer.
