**Introducing the Two-Way
Talking Touch Screen,**
a convenient color touch screen for
controlling your home systems. Designed
to work with your Simon XT V1.3 control
panel, this LCD screen provides wireless
operation of all security system functions. It
can even be set up to control your home's
lighting and HVAC, provide current weather
conditions, as well as a four-day forecast.

**Convenient home security
plus a whole lot more**

**Options to make the most
of your system**
With the optional GSM reporting and Alarm.com
features, Simon XT™ offers remote monitoring
and control of your security system for
convenient and effective home protection.
Designed for modern life
View household activity online,
check in on sick or elderly loved ones, and even keep tabs on
vacation properties.

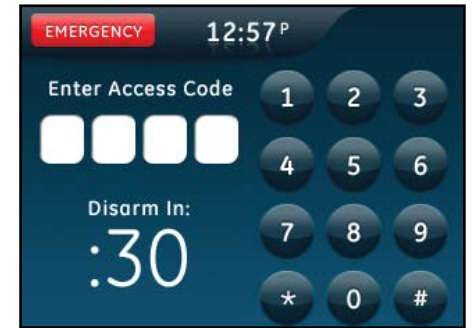

Main Screen Key Functions

Quick, at-a-glance home status provides a complete view of home systems including security, indoor temperature and weather.

Securing your home, and protecting your family

This new wireless touch screen makes it even easier to secure your home. Emergency fast-action keys allow you to quickly summon Fire, Medical or Police assistance with one button, while a backup power supply keeps the system operational during power failures.

The new touchscreen works together with your Simon XT v1.3 system for added convenience and functionality.

Lighting and thermostat control for lower utility bills

This touch screen conveniently allows you to control your Z-Wave® thermostat and lights from a single access point, or with multiple touch screens throughout your home. You can set an automation schedule to adjust your thermostat when the security system is armed to help reduce energy usage and save on utility bills.

Thermostatic control makes it easy to set automation schedules in conjunction with security events to save energy and reduce utility bills.

Always prepared

The touch screen can also provide you with helpful weather information to plan your day or the week ahead. Featuring current weather conditions as well as a four-day forecast, you can be prepared for what nature has in store. And since these wireless units can go almost anywhere in the home, it can keep you up-to-date before you head out the door.

Four-day weather forecast provides helpful information quickly and conveniently.
