

Remote programming of the communicator is blocked by a local communicator setting

Remote programming of the communicator is blocked by a local communicator setting is an error message indicating that the SW3 switch has been set to the **1** position (ON) on the Alarm.com Fire Communicator (ADC-FC100), thereby disabling all remote programming to the communicator.

 **Download/Upload Device Settings**  **PL**

Remote programming of the communicator is blocked by a local communicator setting. Please see the Knowledge Base for more information.

UPLOAD

How to resolve:

1. Turn the SW3 switch to the **0** position (OFF).
2. Allow up to 5 minutes before attempting remote programming changes.

Important: Any remote programming change will cause the module to reboot. Please allow 5–10 minutes for it to come back online and resume communication.
