

How does the Video Doorbell Mounting Wall Plate work?

Video Doorbell Mounting Wall Plate (ADC-VDBA-WP) that is installed between the ADC-VDB770 and the wall. Mounting wall screws and anchors (the same type as what is included with the ADC-VDB770) are also included with each unit.

The mounting wall plate is designed to cover up existing holes or missing paint due to a previous doorbell that would not be covered by the footprint of the ADC-VDB770 itself. The mounting plate is wide enough to cover the width of a Skybell HD Wi-Fi Doorbell Camera so that any missing paint or screw holes will be covered.

Dimensions

- ~13.8cm x ~8.7cm

Installation

- Place the mounting plate against the mounting surface, and then do either of the following:
 - Thread the mounting screws through the mounting bracket and outer (highest and lowest) holes on the wall plate.
 - Thread the mounting screws through the back plate and inner holes on the wall plate.
