Installation sequence

▲ Please paste stickers of exhaust pipe according to the picture.

1.Assembling wheels

Firstly insert the sleeves into the wheels, and then push the wheels into the car. After hearing the voice of click, you can check the wheels are installed well or no. Push the button directly if you want to dismantle the wheels from the car. Firstly, put the sleeves into the front wheels. Secondly, insert the metal gasket into the front axle. Thirdly, put the front wheels into the axle and use your hand to push the wheels to the right place (as shown in picture above).

2.Steering wheel installation

Due to the reason of movement of steering tube, sometimes there is possibility that the hole on the steering wheel and the hole on the steering tube can not match well. If this happens, please use one hand to hold the hook under the car body in order to fix the steering tube. (Referring to the picture) (This means when installing steering wheel, sometimes parents may not aim properly to the hole or not match them well. If so, parents need to use their hand to hold the hook which is under the car body to help to fix).

3.Seat installation

Firstly, take out the and insert into the seat (Take out of the lines and connect terminals accordingly)

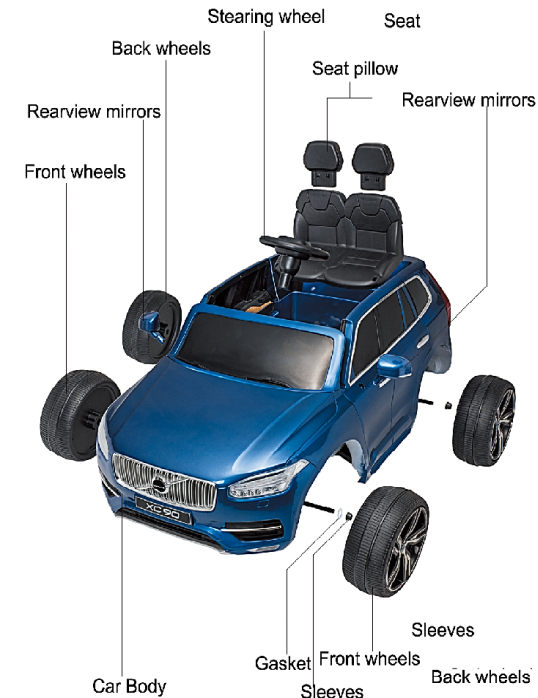

4.Rearview Mirror installation

Align the rearview mirror with the car slot and push until full into place(according the photo)

Attention: Installation must be done by adults
