
Table Installation Instructions

We at [Ocean Offerings](#) appreciate your purchase of the folding cockpit table. Your new table will provide many years of satisfied use. It is made of long lasting materials, a proven design and detailed CNC machining.

Installation of this table is easy and straightforward. It is ready to mount to your pedestal guard without drilling or assembly and nothing extra to buy.

Installation

1. Rotate both brackets (180°) away from the main body of the table. **(Fig. 1)**
2. Remove 8 1" stainless screws, 2 each from 4 **U** shaped clips (Note photos only show 2 **U** shaped clips.), with a #2 Phillips screwdriver. **(Fig. 3)**
3. Grasp each support arm and rotate the support arm 90 degrees from the closed (folded) position to the open position. Rotate each bracket until it contacts the corresponding support arm. **(Fig. 4)**
4. Align the lower clips onto the pedestal guard at a height that will be convenient for you.
5. Push the lower clips onto the pedestal guard, one at a time, until each clip is snapped onto the tube. Holding slight pressure against the lower clips, raise the end of the table until the upper clips are snapped onto the tubes, one at a time. **(Fig. 6)**
6. Attach the 4 **U** shaped clips using 2 screws per clip. **CAUTION** These screws are to be hand tight only. **Do not over tighten these screws.**
7. To close/store the table – raise the end several inches – fold support arms to the closed position and lower table to the pedestal guard until locking snap engages. **(Fig. 9)**
